

## FREQUENTLY ASKED QUESTIONS

**Q Do we have to pay for THERAPYAUDIT?**

**A** No.

**Q Can we add any extra fields to the database to collect data of interest to us?**

**A** At the current release of THERAPYAUDIT (v1.0) users can add up to 26 of their own fields, but these can only be text fields.

**Q Is there a diary facility in THERAPYAUDIT for flagging up-coming appointments?**

**A** At the current release of THERAPYAUDIT (v1.0) there is no diary facility. However there are development plans to add this facility for release 2.0 (mid-2006).

**Q Can we use THERAPYAUDIT to generate clinic letters?**

**A** At the current release of THERAPYAUDIT (v1.0) there is no letters module. However there are development plans to add this facility for release 2.0 (mid-2006).

**Q Can we use THERAPYAUDIT on PDAs such as PocketPC?**

**A** We have development plans to add this facility (TAMobile) mid-2006. It will only be available for PocketPC.

**Q How does THERAPYAUDIT link to our other hospital IT systems?**

**A** THERAPYAUDIT has been designed to be simple and flexible and as a result the basic version does not link to other IT systems to extract data (such as blood results). It is, however, fully accessible by other IT systems such as an Electronic Patient Record (EPR) solution that may want to see the data THERAPYAUDIT holds. There are additional modules that will integrate THERAPYAUDIT to other IT systems but these must be purchased from Rainy Day Software Limited. Call +44 1284 725146 for more details.

about 20 minutes per patient to go through paper notes and extract historical as well as

**Q Can we have more than one user of THERAPYAUDIT (can we log in with different usernames and passwords to identify different users)?**

**A** Yes you can. To do that you simply add more user accounts in THERAPYAUDIT. As there is a full audit trail facility we strongly encourage you to use different accounts to identify who does what.

**Q Can we use THERAPYAUDIT on more than one PC in the department?**

**A** Yes you can. To do this you must identify a 'shared area' on the computer network which is accessible by all the PCs you want to install THERAPYAUDIT on.

You then install THERAPYAUDIT on each PC, and make a copy of the THERAPYAUDIT database in that shared area on the network. Having done that the last thing to do is to log in to each THERAPYAUDIT on each PC in turn and 'point' it at the database on the network. The network location of the database is always shown in the title bar of the main THERAPYAUDIT window.

**Q Can we get any training in the use of THERAPYAUDIT?**

**A** You can, but you will have to pay for it. THERAPYAUDIT is supplied with a User Guide with worked examples, help files, email support and resources in the relevant area on the website. Additionally you may have had some help with installation and initial data entry. All this will help you to get to know THERAPYAUDIT, so a need for formal training is very unlikely. However, if you still feel you require training Call +44 1284 725146 for more details.

**Q How long does it take to populate THERAPYAUDIT with typical patient details?**

**A** Experience shows that, once someone is familiar with using THERAPYAUDIT, it takes

about 20 minutes per patient to go through paper notes and extract historical as well as current information.

**Q Are there any other therapy areas covered by THERAPYAUDIT?**

A Currently THERAPYAUDIT is available for Crohn's and Ulcerative Colitis. Other areas such as Rheumatoid Arthritis, Psoriatic Arthritis, Psoriasis and Ankylosing Spondylitis are being added. The THERAPYAUDIT approach is suitably flexible that it lends itself to virtually any therapy area, but areas will only be developed in response to joint clinician/pharma interest.

**Q Our IT department wants to know the technical details about THERAPYAUDIT. What can we tell them?**

A THERAPYAUDIT is a Microsoft .NET application utilising a Microsoft Pocket Access database on the THERAPYAUDIT PDA product (TAMobile), a Microsoft Access database on the THERAPYAUDIT PC (TAPC) product, and a Microsoft SQLServer or MySQL database on the web-based THERAPYAUDIT Enterprise (TAEnterprise) product. In its basic form THERAPYAUDIT does not need to interface with any other IT systems, but is fully accessible by them. It is a single, or multi-user system. Access to THERAPYAUDIT is governed by its own user account.
